

Aneetha Chandhirasekar

Databricks Certified Data Engineer Associate

📍 Melbourne, VIC | ✉ aneetha.chandru108@gmail.com | ☎ 0415581622 | LinkedIn: linkedin.com/in/aneethachandhirasekar/

Professional Summary

Lead Data Engineer with 19+ years of experience designing, architecting, and delivering enterprise-scale modern data platforms. Deep expertise in Databricks, Snowflake, and the Azure data ecosystem, with a strong focus on scalable lakehouse architecture, Delta Lakes, and enterprise data warehouses. Skilled in data pipeline design, solution architecture, migration strategy, and performance optimization, enabling advanced analytics and forecasting use cases. Proven track record in modernizing legacy data estates, implementing robust governance, lineage, and data quality frameworks, and leading teams to deliver complex data engineering solutions. Instrumental in shaping technical solutions, responding to RFPs, and driving large-scale digital transformation projects.

Core Competencies

- Data Engineering & Pipelines: Spark, Python, R, Advanced SQL, PL/SQL, ETL/ELT orchestration, Delta Lakes/Warehouses/Feature Stores, Informatica, Oracle ODI metadata-driven frameworks for rapid creation and maintenance of data assets
- Cloud & Data Platforms: Azure (Databricks, ADLS Gen2, Data Factory, Azure Machine Learning), Snowflake
- Governance & Quality: Metadata management, Data lineage, Data quality frameworks, Access controls
- Analytics & Reporting Enablement: Advanced analytics, Forecasting, Machine Learning / Feature engineering pipelines, Power BI dashboards
- Observability & Monitoring: SLA dashboards, Pipeline performance, Cost optimization
- DevOps & Automation: CI/CD pipelines, YAML/JSON configurations, Azure DevOps, Automation scripting using Python and R
- Leadership & Delivery: Team mentoring, Career development & performance management, Agile delivery, Stakeholder engagement, RFPs & solutioning
- Applied AI/ML Knowledge: Experience with LLM evaluation, RAG retrieval approaches, and real-time/streaming pipeline concepts through hands-on experimentation

Key Achievements and Awards

- Achieved Databricks Certified Data Engineer Associate
- Optimized ETL pipelines – Achieved 40% cost reduction (\$300k annual savings) and 30% faster processing times

- Improved data quality by 20%, significantly enhancing data accuracy and reliability
- Delivered multiple analytics-ready pipelines and feature pipelines on Delta Lake for ML, forecasting, and reporting use cases
- Deployed governed Delta Lake and modern data platform solutions in high-complexity environments, ensuring controlled, scalable analytics and advanced ML capabilities
- Customer Satisfaction Award – Infocentric, 2023
- Above & Beyond – Infocentric, 2025
- Delivery Excellence Award – Iconplc
- Role Excellence & Team Management Award – Wipro

Professional Experience

Lead Data Engineer – Infocentric (Client: Coles), Melbourne

09/2018 – Present

- Led a medium-sized data engineering team (4–8 members), overseeing resource allocation, project estimation, roadmap definition, PI and sprint planning, and establishing best practices for delivery excellence.
- Led enterprise-scale data engineering and migration projects, building lakehouse platforms on Delta Lake and migrating Oracle workloads to Databricks and Snowflake, including platform architecture, pipeline orchestration via Databricks Job API, and metadata-driven frameworks powering analytics, ML, and feature pipelines.
- Designed and maintained analytical pipelines on Delta Lake to support machine learning, forecasting, and advanced analytics use cases.
- Built and productionized batch and intra-feed pipelines, enabling reliable data integration and publishing to multiple tenants.
- Owned Data Engineering assets, implementing best practices and engineering standards for scalable, fault-tolerant pipelines, incorporating peer and code review processes for quality assurance.
- Developed a metadata-driven R framework for feature table creation and validation, supporting distributed computing, configurable pipelines, and rapid maintenance—accelerating developer productivity and ensuring idempotent, scalable, fault-tolerant pipelines.
- Designed and implemented Delta Lakehouse architectures, creating and managing Databricks clusters and job clusters to enable scalable, fault-tolerant data platforms.
- Developed and managed automated workflows using Databricks Job API, including pipeline orchestration, monitoring, and alerting to ensure reliable execution.
- Authored complex SQL queries for large-scale data transformation, aggregation, and analytics, optimizing ETL processes and Delta Lake tables for performance.
- Directed key activities for Unity Catalog and serverless SQL Warehouse migrations, driving alignment and execution across teams.

- Partnered with platform engineering, ML Ops, and Microsoft teams to establish scalable platform strategies and robust data architecture.
- Developed Power BI dashboards for observability, SLA monitoring, and cost optimization.
- Conducted requirement gathering workshops with data scientists, data architects, cross-functional teams, and business stakeholders to design enterprise-scale data ingestion and analytical tables.
- Managed DevOps practices, including Azure DevOps, ensuring automated, reliable, and scalable deployment processes.
- Defined quarterly roadmaps, participated in PI planning, and managed agile sprints for data engineering team.
- Contributed to Infocentric RFP submissions and technical solutioning for cloud migration projects.
- Managed a team of 4 consultants, driving career development, performance management, and delivery excellence.

Data Warehouse / BI Developer – Icon Clinical Research, Chennai

10/2013 – 06/2018

- Led development of enterprise data warehouses, datamarts, and operational reporting systems.
- Designed and implemented ETL frameworks using ODI, PL/SQL, and Tableau/OBIEE.
- Migrated legacy systems to Salesforce and Workday, enabling modern data architectures.
- Delivered scalable, metadata-driven integration solutions with enhanced performance.

Business Intelligence Consultant – Wipro Technologies, Melbourne & Chennai

11/2006 – 08/2013

- Designed and implemented large-scale data warehouse and BI solutions for global clients.
- Delivered complex ETL pipelines using Informatica, PL/SQL, and Business Objects.
- Managed teams across geographies, ensuring timely project delivery and stakeholder alignment.
- Led migration and demerger projects, providing architectural guidance and risk analysis.

Education

Bachelor of Computer Science Engineering – Anna University, India (2002-2006) | GPA: 79% (Distinction)

Residency Status

Australian Citizen
